Commenc

A class of 63 Seniors will receiv diplomas at Appomattox high scho commencement exercises next Frida night, June 7. The following pr gram has been announced:

Orchestra
Processional
Invocation, Rev. L. C. Shearer
Address of welcome, Chairm Moses Jr., class president
Salutatory, Charles T. Moses
"If I rest, I rust" by Consta Fuly
"Does a high school educat pay?" by Mary Helen Johnston
"Personality looks ahead" by Fra ces Harvey
"Yesterday, today and tomorrow by Ilah Buchanan
"When will Democracy fail?" by James Redding
"The hope of America," by Jame Sites, Jr.
Awarding of diplomas, scholarsh and medals, by Principal L. Cra ley
Valedictory, James Sites Jr., Recessional.

Honor Students Announced

When the class of 1940 gradua next week at the Appomattox h school, two boys will carry off t honors, Professor L. Crawley tod, announced that at a faculty mee ing this morning, James Sites, Gladstone had been designated valdictorian of the class and Charle Thomas Moses had been designate as salutorian. James Sits was al awarded the Burks scholarship me al.

The following list of Seniors re ceived honorable mention was an- nounced by Professor Crawley: Con stance Fulp, David Christian, An drew Paulette, Josephine Murray, Earene Walton, Frances Harvey, Ilah Buchanan and Mary Ellen John son.

Supervisors To Meet Wednesday

The board of supervisors of Appomattox county will have its regular monthly meeting next Wednesday, June 12 at the office of the county clerk.

Town Collected $144 in Fines

At the June meeting of the town council of Appomattox it was revealed that $144 in fines had been collected by the town during May. The town will pay during this month a total of $558 in interest on its sewer bonds and notes.

Local Items

The enrolles of the present soil conservation CCC camp at Appomattox will move to a new camp near Lexington next month. About fifty boys from the local camp left this week for the new camp.

The following from here went to Charlottesville Tuesday night for a bowling match between ladies and mens' teams of the Bowling Center teams of Charlottesville and the Jamerson Bowling Alley of Appomattox: Mr. and Mrs. G.M.Dean, Mr. and Mrs. James H. Lucado, Mr. and Mrs. C.H. Robinson, Raymond Jamerson; Misses Beulah Ferrell, Elizabeth and Lucy LeGrande; Mrs. M. T. Parrish; Mrs. Grover Smith; Edward Jamerson; Judson Carter, Robert Moore.

Miss Bess Christian returned to her home here Tuesday after receiving her Bachelor of Arts degree from Randolph-Macon Woman College. She was president of the Pan Hellenic Council for the past term and also had a speaking part in the Greek play which was presented on May 11. She expects to enter the Medical College of Virginia in September for a course in medical technology.

Mens and ladies bowling teams from Charlottesville will meet Appomattox in return matches here on Saturday night of this week at 7:30. Charlottesville won both matches at Charlottesville Tuesday night and the two teams here hope to square the count Saturday.

Matches between Appomatox and Farmville will be played tonight at the Jamerson bowling alley.

Forty-three persons were locked up on variety of charges last week-end in Lynchburg.

Father Darkleaf's Column

BY C. B. D.

Father Darkleaf has always heard that after a bitter winter there was a scarcity of insect, bugs and whatnots the next spring and summer. However, that theory has gone by the board. Never in all our life have we seen as many lighting bugs as there are this June. Every tree has the appearance of a Christmas tree after dark. Literally millions of the dynamoed bugs swarm over the countryside every night. Fortunately we are not at war, for we'd surely have difficulty getting a black-out.

National defense is no subject to josh about, up in Hillcrest we have decided that Joe Irby's house is the stoutest in Appomattox and the best under which to dig an air-raid shelter. Now Joe and Father Darkleaf may not be the best diggers around town, but if someone else will dig the air-raid shelter, we will undertake to thwart the national shortage of air-raid defenses by organizing a Sling-Shot Brigade to snipe at the seat of the pants of parachute invaders.

We have it: we'll call our Sling-Shot Brigade "The Liddle David Minute Men!"

Rev. R.E Redding knows that it pays to advertise! Last week he inserted a classified advertisement of frying size chickens for sale. As a result he got over twenty telephone calls and sold out completely in a few hours! "They even got me out of bed to sell them chickens," he declared, saying that he spent the best part of Friday running down chickens on the barnyard.

His advertisement was supposed to be run two weeks, but he asks us leave it out of this issue as he has sold out, but hopes to have some more fryers by next week!

We thought that the invasion of the men from Mars Orson Wells put on would remain as the classic case of mass jitters in America. But, some of our citizens are just as upset now over the dread that they may wake up any night and find a parachute enemy under the bed, armed with a machine gun, a bicycle, a bag of deadly cholera germs and all set to pitch hand grenades.

Local School Library Gives Interesting Service

The Appomattox high school library circulation records show a grand total of 18,030 books at the end of the month of May. During the month of April there were 2-327 books in circulation.

The circulation in May shows 761 non-fiction books and 625 books of fiction, maging a grand total of 1,653. As books were being called in for the taking of an inventory, the circulation was smaller in May. However, the overdue books have practically all been returned.

The teachers and librarians are stimulating the reading of more non fiction books, which include books of history, fine arts, biography and travel; useful arts, religion and philosophy. As a rule one-third of the books in circulation are non-fiction.

The figures of circulation to date include the books that are constantly being stirred out by students and by teachers for use in class periods.

Reference sections in the library continue to be varied and interest-

Lee Theatre Ball Team Has One Home Game

The Lee Theatre baseball team played at Altavista Saturday afternoon in a Skyline League game. On Sunday at 3:15 P. M. the Piedmont Label team from Bedford plays the local team here.

John C. Caldwell announced today that John Willey, star University of Virginia player would pro bably pitch for Appomattox Saturday.

He also announced that Dick Tate, star Lynchburg player had signed to pitch for Appomattox and might be used in the Sunday game here. Tate should easily be the class of the Skyline League and will be a great asset to the local team.

Appomattox won from Hampton-Looms at Bedford last Saturday in a free-hitting game. Henry Beard pitched for Appomattox.

HIGH-GRADE HAY SAVES FEED COST

Fertility Value of Legumes Is Also Beneficial.

By W. B. NEVENS
(Professor of Dairy Cattle Feeding, Illinois College of Agriculture.)

Producing and feeding high-quality hay is one of the best ways to lower live stock feeding costs.

To make the present conservation program of growing more acres of soil-building legumes and fewer acres of soil-depleting cash crops more effective, high-quality hay for live stock feeding and use as a grades for bedding, which can be returned to the soil in the form of manure, should be used. On most farms material savings in the cost of producing live stock and live stock products result from feeding more high-quality hay and less grain for each animal unit.

Then too only high-quality legume hay sells for more than the value of the phosphorus, nitrogen and potassium it contains. The fertility value of alfalfa, clover and soybean hay is $8 to $9 a ton. This means that a profit is possible only on the highest grades when one is raising hay for market.

Quality in hay really means feed value. The factors which affect quality include maturity or ripeness, percentage of leaves, color, foreign material such as weeds mixed with the hay, soundness or condition, size and pliability of the stems, and the aroma.

From the standpoint of the chemist who analyzes hay samples, quality in hay refers mainly to its protein, carbohydrates, mineral and vitamin content. From the feeder's standpoint, the extent to which these nutritive elements are present is represented by the quality factors, such as maturity, leafiness, and green color, that can be judged by examining the hay.

Wild Game on Farm Can Be a 'Pay' Crop

Farmers who support game on their farms are just as much justified in expecting some return from it as for their crops of oats, beef or corn, says Donald Hatfield of the University of Minnesota. He suggests farmer-sportsman cooperatives to protect the farmer against trespass abuse and to give the hunter more land to shoot over.

Michigan, Ohio and Iowa are some of the states where cooperatives have been set up. By this plan, the farmer furnishes the land and grain and the sportsman contributes cash either directly to the farmer or toward increasing the game supply.

The best plan, says Hatfield, is for several farmers to form an association aggregating not more than 4,000 acres in a solid block. Post the area and make rules regarding the number of hunters per unit of area. From one to three hunters for each 30 acres probably is the best number to start with. Keep the price low but high enough to support improvements.

Sunday afternoon Appomattox was defeated 8 to " by Craddock-Terry in a ten-inning game. Craddock-Terry piled up a big lead in the early innings. Lathan Harvey pulled a home run with the scoring for Appomattox and later teamed with the heavy and steady hitting of Byers to tie the score. Craddock-Terry was given the winning tally in the tenth when Stanley walked in Garlee with the bases loaded. Appomattox lost out in the last half of the tenth when Overman grounded out weakly to the pitcher and Garlee tying out on second base. Minnick started pitching for Appomattox and was followed by DeFord and Sturley.

The loss dropped Appomattox to second place in the league, one game behind Buena Vista. Appomattox has lost only two games.

FARM TOPICS

ELECTRICITY AIDS FARM OPERATIONS

Power Yields More Work at Less Cost.

By NORTON IVES
(Extension Agricultural Engineer, University of Minnesota Farm).

When you buy electricity you buy work. The success of the rural electrification program could not be measured in terms of miles of line or numbers of customers connected. These only show the amount of money invested and the amount of debt incurred. It is the engineer's work. The true value of electricity lies in its ability to do work cheaper and better than by old-fashioned methods.

Unless put to work at productive labor or money-saving tasks, the "juice" is just another expense. When given a chance, however, it is the cheapest laborer on the farm. A small quarter-horsepower motor will do the work of one man and at an energy cost averaging only one cent per hour.

Feed grinding is accepted as a money-saving practice on most live stock farms, and when rates are moderate, electricity will do the job cheaper than any other form of power. At a cost of 2.5 cents per KWH (kilowatt hour), 25 cents will grind a ton of oats, 1,100 pounds of barley or 2,800 pounds of corn to medium fineness. Overhead bins, arranged for automatic self-feeding, practically eliminate labor cost and permit the operator to do other chores while the next day's feed is being ground.

In purchasing an electric feed grinder, the motor costs far more than the grinder, Ives point: out, so provisions should be made to see that the power unit is made portable and may be moved from one job to another. A three-horsepower electric motor, in addition to grinding feed, will saw wood, elevate grain or corn, run machines in the farm shop, hoist hay and even shell corn. When put to work, highline current is the best hired man on the place. If left in the wires, it will "eat its head off."

Straw Erosion Control

If you have an old straw stack which you don't need for feed or for any other purpose, don't burn it, or just let it stand out in the field. You can make good use of the straw for erosion control. Straw—as well as pine needles, leaves and other mulch materials—can be made to save your soil. Soil savers have a pat slogan for gully control: "Seed it, fertilize it, mulch it and watch the grass choke the gully to death." The idea is worth trying.

Rural Briefs

Lightweight barley can be fed profitably to hogs, it is pointed out by the South Dakota experiment station.

* * *

Family vegetable gardens are called "the most valuable area on the farm" by leading home economists.

* * *

Of the 13 minerals, required by the animal body, salt is the only one generally lacking in the farm animal diet.

Garden Club Has Garden Party

The June meeting of the Appomattox Garden Club will be in the form of a garden party at the home of Mrs. F. C. Dresser on Friday June 14, at 3:30. Other hostesses will be: Mrs. Margaret Miller, Mrs. Webster Babcock and Mrs. J. C. Caldwell.

Members are asked to bring both flower and bird prints for exhibit and a large number of exhibits is requested. Catrerine Robertson, of Lynchburg will render serveral musical selections.

Be courteous to tourists.

Local merchants will be glad to handle your country produce.

FARM TOPICS

SAFETY ON FARM IS 'HOMEMADE'

Rural Families Operate on Own Responsibility.

By M. G. HUBER
(Agricultural Engineer, Wales Extension Service)

Safety on the farm is largely homemade. One of the reasons for so many accidents on the farm is that farm families operate largely on their own responsibility. For city people at work or at home there are numerous safety precautions, and someone to enforce them. But the farmer to a great extent must be his own safety engineer and almost entirely his own disciplinarian.

S. H. McCrory, assistant chief of the bureau of agricultural chemistry and engineering in the federal department of agriculture, gives these reasons for the farm being a fertile field for accidents: Much work is done by individuals at some distance from others so that an accident may be serious because help is not at hand. Frequent changes in work and machinery used, which may mean unfamiliarity with equipment and less accuracy of movement. Time pressure at summer work there often are long hours in the field and chores done in a hurry after dark—both conducive to accidents.

He found that in spite of improvements, farm machinery is a top hazard in farm work. The older hazard of animals, such as unruly bulls and kicking horses, is still present, in Kansas, more than half of the accidental farm deaths were caused by machinery and animals.

But in checking hundreds of accident reports, he also found that most of them were caused by carelessness—by haste, by the use of makeshift repairs, by taking chances, by using machinery without guards or with guards removed.

The suffering, the loss of time and the actual cash cost of these accidents shows the need for avoiding them. It is better planning and again that the well-ordered farm, with well-ordered activities, is good insurance against accidents.

Poultry Pest Control Will Increase Profits

Lice and mites know all the tricks necessary to put a poultryman's books into a maze of red ink, but an entomologist at Michigan State college knows how to take care of the pests.

Two treatments a year, fall and spring, are recommended, although commercial poultrymen find that it often pays to take necessary precautions more frequently.

Remember that lice live on the birds and that mites inhabit the coop and the roosts, for this means that two separate treatments are required.

A simple control for mites after a coop is thoroughly cleaned is to spray the interior with half crank-case oil and half kerosene. The spray must penetrate cracks and crevices and cannot be applied with a paint brush.

Lice are controlled by treating the birds. The simplest method, says Dibble, is to place a thin line of nicotine sulphate on the clean roosts just before roosting time. The body heat of the birds releases the nicotine which penetrates the feathers. This treatment must be repeated in 14 days but it will kill most all forms of lice. The repeat treatment is necessary to kill those that hatch from nits or eggs present at the time of the first treatment.

New Types of Plants Are Disease Resistant

Agriculture department scientists have opened new fields of adventure and exploration in the development of new type plants.

Their discoveries have been worth billions of dollars to American farmers. One of the most recent of these points toward the development of a disease resistant tobacco through the crossing of American types with others.

Not all plant scientists work over test tubes and microscopes in big laboratories. The department sends men all over the world in search of new kinds of plants. Others work in fields to adapt plants to American soil and climate.

Bureau of plant industry scientists recently found four years ago with special tobaccos collected in Mexico, Central and South America. Many of these were crossed with American-type tobaccos and the result has been amazing even to the scientists.

The Selection and Operation of A Farm Electric Refrigerator

By IRA MILLER
Farm Electrification Bureau

THERE are few farmers who enjoy high-line service that need be told of the many advantages of an electric refrigerator—how, without attention, it dependably and cheaply protects the family's health, and saves food, money and work. A majority of those who do not already have one are planning its purchase as soon as finances permit, for its many benefits—most marked during the hot days of summer and fall—make it a year-round necessity.

However, there probably are many farmers who do not know how to choose the proper size and type of electric refrigerator for their particular needs, or how to operate it at greatest efficiency and lowest cost. For them, some hints on those points should prove helpful.

Whatever you do, do not buy a refrigerator too small for your maximum requirements. That is a serious mistake and one often made either because the unit is purchased purely on a price basis or because no allowance is made for the possibility of additional mouths to feed or extra perishables to store. A good general rule to follow is to allow two cubic feet of storage space per family member but, in no case, should a farm refrigerator have a capacity of less than six cubic feet.

The type (and also size) of electric refrigerator you need will depend upon your marketing and buying habits, the kinds of foodstuffs you raise, buy and sell, and whether or not you wish to keep supplies of fresh meats and frozen foods immediately on hand at all times.

Proper management is the most important factor in keeping the operating cost of any good electric refrigerator at a minimum. Despite the excellence of its insulation, it should be located in as cool a place as possible and away from the range and other sources of heat. Hot foods should be allowed to cool to room temperature before being placed in the box. The door should be opened as seldom as possible and kept open no longer than is absolutely necessary. The temperature inside the refrigerator should not be lowered needed to protect and preserve the contents—the colder it is obtained, the more current will be required.

Bananas, onions, fish and other foods having an odor should be

Electricity always keeps food clean, safe and whole

tightly covered or well wrapped in wax paper before placing in the refrigerator. Cheese, milk and butter also should be kept covered or they will absorb odors. The coils should be defrosted when only once a week or as soon as there is as much as a quarter of an inch on them is a quarter of an inch. Should your refrigerator fail to operate if the power is on, if the electric plug are in good condition or if fuses have blown. If the trouble is in the compressor, advise the service department of your dealer. Do not try to fix it yourself as it requires expert attention. Follow the manufacturer's directions as to oiling—many units do not require it.

Do these things and your refrigerator will give you years of low-cost trouble-free service and satisfaction.

An Announcement

...t has been announced that I have ...ucceeded T. A. Smith & Co., Funeral ...irectors, a business institution ...hich has operated in this community for a period of more than 50 years.

...n coming to the community, I do ...onsider myself a stranger in ...our midst; having lived in Lynchburg for the past fourteen years.

...n my twenty years of practice as a ...funeral director and embalmer I ...have always made an effort to ...render a dignified and reasonably ...priced service. It is my desire to ...assure the people of this community that I shall endeavor to ...continue to render such a service, ...complete in every detail, and at ...prices within the means of all.

INFANT DAUGHTER DIES

Mary Frances Abbitt, aged one year, five months and seven days, died at the home of her parents, Mr. and Mrs. A.B. Abbitt, near Vera on Monday, June 3. Funeral services were held at the New Hope Baptist church Tuesday at 2 P.M., conducted by the Rev. O.G. Burnette and the Rev. C. A. Colling, Jr. The choir rendered hymns. The active pallbearers were: Carwyle Scruggs, Willis O'Brien, Harry Jennings and Julian Jenkins. Honorary pallbearers were: Wyatt Abbitt, G. F. Abbitt Sr., G. F. Abbitt Jr., Jessie Chernault, Clent Casey, Geo Covington, E.G. O'Brien and J. W. Cawthon.

FUNERAL SERVICES FOR CLEVELAND JAMERSON

Grover Cleveland Jamerson, 54, died at his home here on Friday, May 31, after an extended illness. He is survived by his widow, Mrs. Etta Godsey Jamerson, one daughter, Mrs. R.R. Coleman; and four brothers, James Jamerson, Willie Jamerson and Norman Jamerson of Lynchburg; and George Jamerson, of Spout Springs; and one sister, Mrs. Sarah Hall, of Appomattox.

Funeral services were conducted Saturday at 11 A.M., by the Rev. R. E. Redding and the Rev. L. C. Shearer.

Pallbearers were: Julian Franklin, James Jamerson, Willie Jamerson, Calvin Godsey, Dural Jamerson and Raymond Hall.

Preaching At Wesley Chapel

There will be preaching services at the Wesley Chapel church Sunday June 9. Everybody is invited to attend. Come and bring some one with you.

(6-6-1tp)

Card of Thanks

We wish to express our sincere gratitude to our many friends for the kindness shown us during the illness and death of our husband and father.

Mrs. E.F. Jamerson and daughter.

FAMOUS ACTOR LOOKS UPON LIFE AND LOVE

Brilliant examples of the epigramatic philosophy of a Freemason, who after four marriages, concludes that one woman can be adorable, but two, terrible. Don't miss this fascinating article in the June 16th issue of

The American Weekly
the big magazine distributed with the Baltimore American
On Sale at All Newsstands
